

# JOIN STATOIL 加入我们吧!

Statoil is an international energy company from Norway with activities in more than 30 countries. The research and development branch is building a team of researchers working on seismic imaging in Beijing.

Statoil will recruit 8-10 research candidates to its new R&D department in Beijing. The group will cooperate with other research and developments teams around the world to develop novel seismic imaging software. The research topics are in the field of seismic imaging and velocity model construction. We are building a strong team of researchers with PhD from geophysics, physics or applied mathematics.

We will visit your university in the middle of November for a recruitment session. Our hiring process is web based and will be presented. Applications can be registered in our talent database <http://www.statoil.com/careers>. For further information, please contact Richard Xin ([rx@statoil.com](mailto:rx@statoil.com)).

Please come to see us in "ROOM" at "TIME".
